Education

San Jose State University **Jan 2025 – May 2027**
*Master of Science in **Applied Data Science** GPA: 3.75* *San Jose, CA, USA*

- **Coursework**: Generative AI, Data Warehousing, Data Analysis, Deep Learning, Machine Learning, Statistics, Distributed Systems, Big Data

Mahindra University **Oct 2020 – Aug 2024**
*Bachelor of Technology in **Computer Science*** *Hyderabad, India*

Technical Skills

Languages & Frameworks: TypeScript, JavaScript, Python, SQL, React, Node.js, Express, FastAPI, REST APIs
Data & Infrastructure: PostgreSQL, MySQL, Redis, Kafka, Apache Spark, ETL pipelines, Docker, AWS (EC2, S3, RDS)
AI & Automation: LLM APIs, RAG, prompt engineering, AI agents, LangGraph, vector databases, OpenAI Codex
Engineering Practices: data structures, algorithms, pytest, JMeter, CI/CD, GitHub Actions, code reviews, debugging
Product & Collaboration: requirements gathering, stakeholder alignment, project planning, cross-functional teams, documentation

Experience

Research Assistant **Jul 2026 – Sep 2026**
SJSU Research Foundation *San Jose, CA*

- Developed an **AI-powered patent title generation system** that turns complex patent abstracts into concise, technically accurate titles aligned with **DWPI** standards.
- Fine-tuned **Qwen, Llama, DeepSeek, and T5** on **6,700 patent records** using **FFT, LoRA, and 4-bit QLoRA**; an automated **LLM-as-a-Judge** workflow on a 100-patent test set showed up to **80%** improvement and preference over reference titles.

Student Research Assistant **Jun 2025 – Aug 2025**
San José State University *San Jose, CA*

- Architected a **5-agent AI video editing system** using **Python, LangGraph, Llama 3.2, LLaVA, Whisper, and FFmpeg**, automating multimodal analysis and highlight generation to reduce manual editing effort by **78%** across **50 videos**.
- Built asynchronous **FastAPI** services with **Celery and Redis** for parallel agent execution, task scheduling, and caching, supporting **20 concurrent jobs** with **2.3× higher throughput**.
- Developed a multimodal ranking pipeline using **CLIP embeddings**, speech transcripts, and LLM relevance scoring, improving highlight-selection **Precision@5** from **0.64 to 0.77** across **200 annotated samples**.
- Deployed containerized services on **AWS (EC2, S3, CloudWatch)** using **Docker, GitHub Actions, pytest**, and OpenAI Codex-assisted development, achieving **97.5%** job success and **34%** lower p95 latency.

Software Engineer – Backend **Aug 2024 – Dec 2024**
Narkha LLP *Bangalore, India*

- Developed and maintained **RESTful APIs** using **Python, FastAPI, PostgreSQL, and SQLAlchemy** for financial transaction tracking and reporting, implementing **JWT authentication**, input validation, and role-based access control.
- Built asynchronous data-processing workflows using **Celery and Redis**, handling **100K+ financial records monthly** with automated retries, transaction deduplication, and error logging to improve processing reliability.
- Optimized **PostgreSQL** queries through indexing, SQL query tuning, and pagination, reducing report generation latency by **30%** and improving API performance for transaction history and financial summaries.
- Supported backend deployment using **Docker and AWS EC2**, implementing unit and integration tests with **pytest**, **GitHub Actions CI/CD**, and application logging to streamline releases and troubleshooting.

Data Science Intern **Jun 2023 – Aug 2023**
Innominds Ltd *Hyderabad, India*

- Redesigned a **Python LiDAR pipeline** for a Qualcomm autonomous-vehicle PoC using **RANSAC** ground-plane segmentation and **DBSCAN** clustering (**Open3D, PCL**), extending detection range **25%** and cutting latency **15%**.
- Improved object detection accuracy by **27%** through point-cloud filtering, feature engineering, and hyperparameter tuning.

Projects

Internal Headcount and Budget Planning Tool | *TypeScript, React, Node.js, PostgreSQL, Docker*

- Gathered requirements from **4** finance and people teams and shipped a **React** and **TypeScript** tool in **6** weeks.
- Built **Node.js** and **PostgreSQL** APIs replacing **12** spreadsheets, cutting monthly planning prep **3 days to 1 day**.
- Deployed with **Docker** and **GitHub Actions** CI/CD, with **85%** test coverage and **99.9%** uptime.

AI Recruiting Workflow Assistant | *Python, FastAPI, LLM APIs, RAG, PostgreSQL*

- Built an **LLM** assistant on **FastAPI** that summarizes candidate feedback, saving **15** recruiters **6 hours** weekly.
- Cut manual screening time **35%** with **prompt engineering** and **RAG**, validated on **200** labeled profiles.

Airbnb Clone | *React, Node.js, Express, MySQL, Docker, AWS*

- Built **REST** APIs on **Node.js, Express, MySQL** sustaining **200 req/s** with sub-second latency via caching.
- Held **5,000 concurrent users** in **JMeter** tests with indexing, connection pooling, and **Docker** on **AWS**.

Multi-Agent AI Engineering Tutor | *Qwen3, vLLM, PostgreSQL, pgvector, RAG*

- Built hybrid **RAG** tutoring with **PostgreSQL + pgvector** memory shared across web, Chrome, and VS Code.
- Raised **Qwen3** throughput from **3.6 to 20.6 tokens/sec** (**5.7x**) via fine-tuning and decoding on **vLLM**.

Research

Master's Thesis: Diagnosing failures in **multi-agent AI systems** and improving **agent coordination** in these systems.

Certifications

Amazon Web Services: Certified Developer – Associate | Certified Machine Learning Engineer – Associate
